

Intermediate Sustainability Advisor (full time)

Overview

EnviroStrat is a sustainability and natural resource sector advisor and an impact investment project developer with a unique profile and service offering in the market. Our work is multi-disciplinary, spanning applied science, engineering, economics, public policy and investment in the marine, freshwater, agriculture, energy, waste and climate sectors. We engage with clients in government, the private sector, iwi (indigenous groups) and philanthropy, and work in New Zealand and internationally. In addition to our advisory work, EnviroStrat is a direct investor in projects that have potential to offer breakthrough solutions and both financial and non-financial returns – impact.

We are growing and looking for new talent to complement our Auckland-based team. This is a great opportunity if you are creative, inquisitive, technically strong and passionate about transformative solutions for our country and its economy. The person we seek has a demonstrated ability to work on multiple tasks or projects, has consulting or professional services experience, is comfortable presenting to external audiences and demonstrate initiative and a can-do attitude.

What will the roles do

You will work within multi-disciplinary teams and lead or contribute to:

- Development and implementation of nature- and market-based solutions to natural resource management and climate adaptation in New Zealand and internationally.
- Development (and communication) of knowledge and decision-making tools to assist EnviroStrat clients.
- Policy analysis and transition strategies to low-carbon sustainability solutions in both the private and public sectors.
- Establish and grow relationships with iwi and decision-makers in government and business.

What we are looking for

- Evidence of intellectual curiosity, the ability to work across different disciplines and sectors and in small teams creating and delivering projects for our clients.
- You possess excellent communication and inter-personal skills, applied research, technical and business writing and have a track record of project management and delivery, ideally in a consulting environment.
- You will have a robust grounding in technical or strategic solutions in a sustainability context and at least 5 years professional experience. We are agnostic about your disciplinary background or education but you must be confident working with subject matter experts both inside EnviroStrat and externally.
- You have an understanding of the New Zealand environmental policy context and market drivers, and ideally knowledge of environmental markets, nature-based solutions and are cognisant of the role of finance and investment in achieving environmental impact.
- Experience and knowledge of te ao Māori is highly desirable.
- Whilst we are sector-agnostic, familiarity with the key sectors in which we work is important and a willingness to learn new subject matter is essential.

All qualified talent will be considered for employment without regard to race, colour, religion, sex, sexual orientation, gender identity, national origin or disability. If you are interested, please email your covering letter and resume to enquiries@envirostrat.co.nz
